A Time-resolved effective dimensionality
Participation ratio
Time from trial onset (ms)
dSPM, signal on at 250 ms + DMFC-matched noise
dSPM + DMFC-matched noise
dSPM
DMFC
DMFC, noise floor removed
B Noise-corrected cumulative variance
Cumulative fraction of above-noise variance
Principal component
DMFC
dSPM
Next TP
Paddle-only
C Robustness to the noise estimate
PCs to 80% of above-noise variance
global shuffle, models over 35 PCs
global shuffle, models over 48 PCs
within-condition shuffle, models over 35 PCs
within-condition shuffle, models over 19 PCs
